

Care / Maintenance:

Australian Excellence

Meek is an Australian bathware design brand. Our products are developed and made locally, working with industry leading companies to produce bathware that embodies excellence.

Thank you for purchasing your new Meek piece.

A great deal of care, innovation and craftsmanship goes into the bathware we produce. The following care and maintenance will help prolong the life of your piece, ensuring your enjoyment of the product for a long time to come.

Concrete:

General cleaning -

Use a soft cloth such as a microfibre towel with warm soapy water for general routine cleaning. Avoid scours and abrasive cleaners.

Dried and stubborn stains -

Dried stains such as toothpaste can be removed with a wet soft cloth.

For stubborn stains, a mild non-abrasive, non-acidic cleaner such as Cerapol is recommended. Use such cleaner with a soft cloth without excessively scrubbing the area.

It is recommended that any spills from cosmetic and cleaning products are wiped away immediately and not left to dry on the concrete.

Patina through use -

With the proper care and maintenance, the concrete will develop a beautiful patina. The surface texture and character markings will become more pronounced giving the concrete a natural worn in look and feel.

Timber:

Avoid placing timber in direct sunlight or close to strong heat sources. Also avoid placing hot or wet items directly on the wood for extended periods of time.

General cleaning -

Wipe the wood with a clean, dry cloth. For cleaning, use a soft cloth with water and a general mild detergent.

Stains -

For dried stains, a specialty cleaner for painted or 'stained' timber may be used in combination with a soft non-abrasive cloth.

Remove soap residue immediately, using a clean, soft cloth.

It is recommended that all spills & stains be removed immediately from the surface of the wood.
